Bandelier, Adolph F.

1890 The Ruins of Casas Grandes I, II. *The Nation*, 1313-1314 166-168, 185-187 (The village of Casas Grandes is described as, "a thriftless agglomeration of decaying adobe houses." Bandelier relates that an Opatas from the Sierra claims the site was built by Opatas and called Huehueri-Kita (great house). He considers this no more than a possible explanation. There are comparable ruins almost continuously from San Diego to Ascension except where topography forces the Rio Casas Grandes between mountains. Distances between mounds vary a good deal. Pottery fares well in these ruins since there is no stone in the construction and melted adobe blankets the pots. The sites are frequently on terraces. Bandelier reports ten site clusters between Casas Grandes and Corralitos. He takes pains to explain that this does not mean the area was heavily populated since the ruins are presumably different ages. Modern houses already existed on Paquimé by this time. He guesses, assertively, that no more than 4000 people lived at the site prehistorically. He gives an inaccurate description of wall construction techniques, and mentions that they were washed with gypsum, sometimes painted red. He mentions a large meteorite having been removed a few years previously. Shell, shell beads and turquoise provide evidence of trade. Bandelier had some shell sourced to the Gulf of Mexico and Pacific coast by "specialists." He also noticed the acequia running in to Casas Grandes. In part II Bandelier discusses Cerro de Montezuma. There is an "ancient circular watchtower on top." It is surrounded by a crumbling wall. There appears to be four "compartments" outlined by stone inside. There are trails out in several directions from here suggesting some sort of bond between Casas Grandes and sites on the west of C lived in caves to the south in the seventeenth century. There is no distinct stock or race of cave people. Documentation on Casas Grandes goes back to 1660 when Frey Pedro de Aparicio reported the valley to be populated by Sumas. The Sumas, Janos and Jocomes were enemies of the Opatas of Sonora. Bandelier doubts that Sumas built Casas Grandes

since they pay no special attention to the site (according to previous accounts). The Montezuma lore is attributed to Spaniards. The first reasonable description of Casas Grandes is Bartlett's. The Janos and Jocomes merged into the Apache and the Suma scattered in colonial era. This is an interesting and informative account. His description of the San Diego area certainly contrasts with its modern starkness.).

Hard, Robert J. and William L. Merrill

1992 Mobile Agriculturalists and the Emergence of Sedentism: Perspectives From Northern Mexico. *American Anthropologist* 94(3):601-620 This paper uses the Tarahumara as an example of how linear models from hunter-gatherer to agriculturalist present an over-simplification of settlement patterns. Several people have come to realize that prehistoric Southwest agriculturalists may have been more mobile than previously believed. The Rarámuri or Tarahumara are dependent on maize year-round but shift their residences during the growing season and during the winter. (A map shows that the area they are discussing is the SW corner of Chihuahua with their work being at Rejogochi. About 40 Ha of maize fields serve 155 people. Maize is 3/4 of their diet. A description of social organization follows. During the growing season households move to fields outside the Rejogochi Valley. Some families winter in rock shelters. Sometimes families relocate for wage labour, often to Cuauhtémoc. During the winter and the spring families often spend days or weeks at the religious centre of Basíhuare. So there are four types of residential mobility. Logistic mobility largely involves men pursuing wage labour or people spending whole days in fields. Detailed descriptions of these mobility practices follows. The Tarahumara have dispersed field holdings which may provide protection from microclimate protection. Alternately this arrangement may result from not having enough arable land in the Rejogochi Valley. The bilateral inheritance pattern, with a tendency for people to marry outside the valley, also scatters holdings. This issue is

"tested" using indexes of productivity and consumption. They conclude that people are not protecting themselves from microclimate variation but dealing with land availability. The Tarahumara depend heavily on stored food and practice a lot of residential mobility which is an exception to Binford's (1980) expectation that stored food and logistic mobility co-occur. Three reasons are given for Tarahumara residential mobility. These are: i) the substantial amount of work involved in these distant fields ii) long stays at the fields require having women present to cook iii) crops must be transported back to Rejogochi or consumed by the whole family at the outlying residence. Rock shelters are warmer and drier in the winter. Families with sheep and goats prefer to winter them in rock shelters so kids survive. Rock shelters take little effort to prepare for winter. The authors point out in several places that situational factors such as an illness will affect settlement patterns of a household, at least temporarily. * a good paper that makes sense. Unfortunately there is no attempt to connect this to prehistoric Chihuahua or overt recognition of the fact that the Tarahumara have been driven back into the High Sierra historically. Merrill in particular has extensive experience with the Tarahumara. *There is an less that gracious exchange of comments in the December 1993 edition of American Anthropologist (95)4. Jeffrey W. Bentley and Robert McC. Netting (:1003-1005) offer several criticisms. Hard and Merrill claim to disprove the idea that people work distant fields to minimize the chance of total crop failure, which is an idea they attribute to Bentley and Netting. But Bentley and Netting give that as one of many reasons for scattered land holdings. Hard and Merrill are also faulted for ignoring the Boserupian paradigm of intensification which encourages scattered holdings as land becomes scarce. They also do not provide information about management of distant fields (e.g. cropping, fallow periods, travel time). Hard and Merrill mention the "Emergence of Sedentism" in their title but the Tarahumara are not incipient farmers. (* Is this is an issue of scale - a couple centuries to an archaeologist may well be close enough to incipient). Hard and Merrill (:1005-1007) reciprocate by accusing Bentley and Netting of misunderstanding their work. Hard and Merrill do address other factors for land fragmentation and, at any rate, it is not a major focus of the article to deal with extensively. Hard and Merrill also point out (sarcastically) that they were not dealing with the origins and evolution of this system. (* A disingenuous claim given their title). Nor do they claim that this study ends the idea that dispersed holdings are an insurance strategy, which the Tarahumara are aware of, and often take advantage of. In fact they note that Rejogochi Raramuri try to consolidate their holdings. Hard and Merrill claim that a major finding of their paper is that mere clustering of resources does not promote logistical mobility and sedentism. The Raramuris of Rejogochi are residentially mobile although everything is within an average of five Km from their valley homes. (* Is this average masking some long distances?). Hard and Merrill emphasize that they do not see the Raramuri as incipient

Kegley, George B.

1979 Excavations at Hueco Tank Park. In *Jornada Mogollon Archaeology*, edited by Patrick H. Beckett and Reggie N. Wiseman, pp. Hueco Tanks is 32 miles east of El Paso in the Hueco Bolson. The site is best known for its rock art paintings. Testing in 1972 and 1973 showed five rectangular rooms, portions of other rectangular rooms, and several pit structures. In Lehmer's classification of Jornada archaeology this site probably belongs to the Dona Ana Phase, between Mesilla and El Paso Phases. So this would line the site up in time with LeBlanc's Black Mountain Phase in the Mimbres Valley (ca. 1175-1300). Hueco Tanks has Chupadero Black on White, El Paso Polychrome, Playas Red Incised, Ramos Polychrome, and other New Mexico types. There are also some Mimbres sherds at the site. Kegley sees this as suggesting connections with Casas Grandes but nothing more. He explicitly rejects colonization sorts of explanations. vol. 19-23. New Mexico State University Press, Las Cruces.

1985 The Chronology of Chalchihuites Culture. In *The Archaeology of West and Northwest Mesoamerica*, edited by Unknown, pp. 269-287. Westview Press Boulder, Chalchihuites culture has two defined branches: Guadiana (Durango) and Suchil (Zacatecas). The Guadiana branch has radiocarbon dates from two sites; it is probably equivalent to Post-Classic. There about 30 accepted radiocarbon dates for the Suchil branch, mostly from Alta Vista, which place the site in the Middle and Late Classic periods. There are 19 dates from Alta Vista on construction timbers with three peaks: around A.D. 470 to 590, 665 to 770, and 815 to 855. These are taken to represent three building phases. The earliest Ayala phase (of the Guadiana branch) is around A.D. 875 to 900, which disagrees with the Schroeder site dates, which fall in the range of A.D. 600 to 800. Overall, Kelley is unaccepting for all Guadiana branch dates, and advocates relying on "archaeological evidence", which is basically ceramic cross-dating. The Ayala phase was roughly confined to the Guadiana Valley, until late in the phase. The Las Joyas phase was a time of building and ceramic production (950 to 1150 in Kelley's proposed chronology). In the following Rio Tunal and Calera phases there was less building activity at the Schroeder site, but there is a wider distribution of ceramics for the two phases. Kelley suggests that the final phase (Molino?) of the Guadiana branch ends at about A.D 1400. Kelley's proposed chronology for the Guadiana branch: Loma San Gabriel - Tepehuan A.D. 1400 + Molino 1350 - 1400 + Calera 1250 - 1350 Rio Tunal 1150 - 1250 Las Joyas 950 - 1150 Ayala 875 - 950 Loma San Gabriel Culture ? < 875 This

paper is not an overview of Chalchihuites being confined to chronology, and presupposes reader familiarity with Chalchihuites culture. Rejecting all of the carbon dates from the Schroeder site for vague reasons is unsettling. He does say the charcoal comes from deposits with mixed ceramic assemblages but could be more informative on this point. See Doolittle (1987) in *The Kiva* 52(2):154-160 for a review of this book.

Kidder, A.V.

1939 Notes on the Archaeology of the Babícora District, Chihuahua Donald D. Brand//Fred E. Harvey. In 221-230 *Kidder opens by relating how E.L. Hewett got him interested in Chihuahua, and particularly the Sierra cliff dwellings, early in the century. During September, 1924, Kidder, George Vaillant, and S.J. Guernsey spent a week at the Hearst Ranch. They dug in a mound near Las Varas and visited cliff dwellings in the Rio Garabato, west of Las Varas. The site near Las Varas was a low mound partially destroyed by a stream and partially destroyed by local*

adobe makers. It looks to have been located about 2 km SSE from the town of Las Varas. Kidder notes that there are not foundation trenches under walls at this site (* in contrast to Animas sites for example). Nearly every room wall had a doorway. Four doorways were rectangular and four were "step-passage" ("T"-shaped). A ninth doorway was changed from rectangular to step passage. (* Carey called "T"-shaped doorways Tau shaped doorways). Five burials, in poor condition, were found under rooms. At least two were tightly flexed. One had a Babícora polychrome jar placed near the head. The roomblock was obviously burned. There were not a lot of artifacts and there was an upper floor to the mound. Carey does not show this site on his 1931 map leaving Kidder to conclude that it was probably destroyed by the creek in the seven intervening years. There are several plates of artifacts from the mound. They also spent one day on a hurried tour of three cliff houses west of Madera on the Rio Chico (near its confluence with the Rio Garabato). Cliff house number 1 is a small dwelling. It is two floors and walls are built with adobe courses the same as the Las Varas Ruin. They dug up two burials with a total of three redware vessels. Cliff house 2 has a large granary that is described in detail. (* This site is adjacent to Cuarenta Casas. It is referred to as Cueva del Puente by Pearson and Sanchez [1990]). Cliff house 3 is mentioned by Lumholtz, Hewett and Carey, before Kidder. (* This is Cuarenta Casas). This site is more thoroughly described elsewhere. *This is an interesting paper although it seem ironic that Kidder, of all people, would practically blow off discussing the pottery., edited by Seventieth Anniversary Volume Honoring Edgar Lee Hewett So Live the Works of Men.
